As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-k87g-leib
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1647

Comment on FR Doc # 2025-02305

Submitter Information

Name: Amber Allaire

General Comment

It is harder to find a job on job boards due to AI. AI causes empty job listings, and skims resumes without looking at the actual person, or having someone read what is really there. Something similar happened with United Healthcare. AI is bad at seeing the actual person behind the screen, it lacks empathy, and it makes mistakes that can't just be solved with more training data.

I find stuff like the Stargate proposal (AI doctors) frightening. AI cannot look at your body, or take the tests a doctor can. It cannot physically see what is going on, and process what you are saying in the same way as a human doctor. It just doesn't do that. It can and will make mistakes if it comes out. Big mistakes.

AI has infested schools, and is making our kids dumber. It auto completes essays for them, and prevents them from learning how to properly communicate. It gives them inaccurate information. It is hard to tell a real article from a fake one someone generated, making the search for accurate information more difficult. Google AI summaries can be inaccurate.

And with artists, writers, musicians, it is also bad. They comprise almost all of our soft power as a nation. They are also the people who make life for millions of Americans a bit more bearable. We are screwing them over, and getting rid of all of the ones that are starting out by favoring AI companies more. All of the greats we could have gotten are all getting replaced by uninspired drivel by corporations and money hungry individuals. Instead of creativity, we are promoting this "cool new workaround to the copyright system!". Instead of being legitimately innovative, AI will cheapen the quality work we produce. Posting things online often is not permission from these people, as that is the main way they are making their money.

I think the first two steps to more ethical AI is transparency and responsibility.

AI companies should be charged with the same crime their users committed, if they did something unethical using the product. That way, they will be prompted to prevent these abuses from occurring.

People who use AI commercially in any way should be required to have a clear visible indicator for the consumer of the AI they used, and what part of the process they used it in.

Stuff made with over 50% AI should also not be fair use. The individual AI parts also should not be fair use.

Social media should have opt out be the default, not the other way around.

Also, I am fine with everyone using my stuff, so long as it isn't used in AI or to scam people. There should be a secondary domain for people who have stuff they are fine with people using their work, but in an ai-exclusionary sense.
