General Comment

Allowing for AI to go unregulated takes away the likenesses of many individuals and may cause an industry collapse for those who create in the art field. Things like music, painting voice acting, many beginner entry jobs and positions would be also taken from people which would affect the job market as a whole. Copyright is important as it protects creations and patents from all creators from Disney to even inventions and allowing that to dissolve would mean individuals can copy anything and everything without any sort of repercussions and no one would be able to protect their individualities and their identities. Regulations need to be made to protect people's likenesses and to provide a fairer use of AI, people should be paid if their likenesses are used or if their copyrighted works are placed into AI systems. Make AI fair so everyone can enjoy it without harming those who have created for years who put their heart and soul into each and every piece they create and so people are no longer replaced by a market looking for more advanced or easy way users without allowing for entry level jobs, because eventually those advanced individuals will need to retire and then there will be no one to replace them and if an AI can just make 'code' then the argument of 'just learn to code' falls flat when those individuals become replaced anyways.
