General Comment

Please do not allow this to move forward. While AI has made noticeable leaps and bounds, unfortunately, our country's copyright protections are significantly behind. The primary issue with GenAI is the fact that it's an amalgamation of work stolen from other creators, without their consent and knowledge simply by pressing a few key words. I've seen countless artists online over the last few years lose their livelihoods because people have trained their algorithms on their intellectual property so much to where it can even replicate partial signatures, making it impossible to differentiate between the real and stolen one. Because GenAI is so incredibly reliant on input data from other users, it removes many artists, musicians, and animators ability to have a say in what is done with their work, or even IF they want their art uploaded to these engines in the first place. Allowing these measures to go through is a disgrace to both copyright law and the already limited protections we have in place to defend creators from this form of mass intellectual property theft. We as artists are already an incredibly vulnerable and disrespected community, the last thing we need are vultures sweeping into make ugly, generic looking "artworks" and sucking out what soul made the original art so unique and HUMAN in the first place. It robs artists of their ability to have autonomy over their work in the online space in the same way that influencers and cryptocurrency traders should their accounts or assets be lost in things like data breaches, hacking, accidental deletion, and similar important assets.

Remember, the definition of art as cited by Google as of March 14th, 2025, at 21:05 hours is:

1.
the expression or application of human creative skill and imagination, typically in a visual form such as painting or sculpture, producing works to be appreciated primarily for their beauty or emotional power.
 - works produced by human creative skill and imagination.
2.

 - creative activity resulting in the production of paintings, drawings, or sculpture.
3. the various branches of creative activity, such as painting, music, literature, and dance.
"the visual arts"

 - subjects of study primarily concerned with the processes and products of human creativity and social life, such as languages, literature, and history (as contrasted with scientific or technical subjects).
 - "the belief that the arts and sciences were incompatible"
4.
 - a skill at doing a specified thing, typically one acquired through practice.
 - "the art of conversation"

By removing the humanity from art, you just have a hollow, bastardized shell of what it could have been.
