

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-kjsg-oabd
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1653

Comment on FR Doc # 2025-02305

Submitter Information

Name: Sara Carter

General Comment

AI is not paid a salary, so it won't spend its earnings on goods and services. If everyone and their unique work has been replaced by AI, who will have the money to buy what you're selling?

AI should be used to enhance the human experience, not eliminate it. Any government plans involving AI should:

1. Protect the IP interests of creators of any form of original works
2. Offer no protections for transformative works created using AI generated from purely copyrighted original works that have not been used with consent of or compensation to the original creator. There should also be heavy punishments for violations.
3. Offer protections for AI works created from copyrighted work that has been compensated for. A system must be in place to track this and proof of the right to use a compensated original work should be available upon request.
4. AI should automate and enhance work tasks, data analysis, and organization as a job aid, not a job replacement.
5. No living person should have their voice or likeness used without consent or compensation for AI purposes.
6. AI should be used to enhance the physical and logical capabilities of machinery, while creating an equal number of jobs that it will replace.

And so on and so on. Action plans and regulations must wrangle the use of AI for the benefit and betterment of society as a whole. When it comes to the looming threat of misused AI, the government needs to protect the interests of the citizens not only within the United States, but also in the outside world.
