Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1654

Comment on FR Doc # 2025-02305

Submitter Information

Name: Benjamin Herzfeld

Address: United States,

General Comment

I am an engineer in the USA, I do not support the use of Artificial Intelligence in general practice of commercialism.

I do support the use of Artificial Intelligence in areas where a repetitive data driven focus is needed: folding proteins, iterative electrical/physical design processes, translation of languages, and any other process that does not inherently require human creativity and soul.

Using Artificial Intelligence to create books, articles, works of art, or other creative or social endeavors (anything shared for human intellectual consumption) should not be allowed. This removes humans from the equation of the world and prevents creativity from thriving. Artificial Intelligence is, at this time, unable to think creatively. It is only able to think within the bounds of what it has been fed to learn, as such it cannot grow beyond those bounds.

Humans are what grow into the future, able to learn and think of new things. Artificial Intelligence is only able to think within the bounds of our knowledge, it can find the part we have missed or overlooked but ultimately not move forward into the unknown.

Focus on the helping solve the engineering problems not replacing the critical thinking skills that humans have.
