General Comment

A.I., specifically generative AI, needs to be heavily regulated to protect not only artists, writers, and actors, but also the general public of America.

A.I has, and will be, used to trick people. Making image that show or say something untrue, copying a person voice or likeness without their consent, and putting many Americans out of a job.

A.I is also blatant copyright infringement, and A.I models need to use vast amounts of data to build their system, and most of this data is copyrighted material used without the creators knowing consent.

I say we can not allow AI and these companies run around without restrictions, and they must be regulated
