

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 14, 2025
Status: [REDACTED]
Tracking No. m89-leut-iv09
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1666

Comment on FR Doc # 2025-02305

Submitter Information

Name: Michael Hough

[REDACTED]

General Comment

As a software engineer, I can guarantee with absolute certainty that we have nothing meaningful to gain by bending the knee to AI salesmen. Certain types of AI are incredibly useful - but those are not the kind of AI that require exceptions punched into copyright law. Discovering new mechanisms for protein synthesis or diagnosing cancer are fundamentally different from putting your face into an advertisement; not because of the underlying mathematics, but because of the data sets involved.

And as a creator, the notion of changing copyright law to cater to AI is sickening. If a business model can't thrive due to the laws in place... that means the business is crime. And the only types of AI that need these exceptions are, again, the kind that cheapen creative works and promise to give big businesses free "labor" when they can afford otherwise. How is your life improved by Hollywood synthesizing the image or voice of an actor? How is your life improved by Facebook inserting your likeness into advertisements? How is your life improved by Hasbro using janky AI images on trading cards instead of paying an artist? That's who you empower by even considering waiving regulations here; it's not you, it's not me, it's not 99% of Americans.
