General Comment

Current AI direction is ridiculous. Creatives have taken a decade building up portfolios online. Their incentive to create and post those things on the internet is directly tied to marketing for their businesses. And AI companies can just vacuum all of that up?

I can't make a car company by stealing car parts from my neighbors and re-assembling the parts. If I can't afford to pay for a business model, I don't have a business. Why is big tech exempt from that basic expectation?

Why do property rights matter when google owns something, but not when Google steals something else to turn a profit on other people's work?

Exemptions to AI means an erosion of basic property rights for everyone. If you expect the common public to respect software protections and other property rights these companies enjoy after those same companies rob us blind with government permission, either tacit or explicit, you're insane.

If property rights don't matter, then they don't matter. If they do matter, stand up for them. Deny the ridiculous exceptions these massive companies want to claim. AI development does not mean the same thing as investment in the generative AI systems these companies want to use to steal from the creative markets, and when they say otherwise, they are lying to you.
