General Comment

As a graphic designer and illustrator by trade, I've watched with dismay as A.I. has crept into my field, sullied its integrity, and led to fewer jobs. And all in service to an unreliable set of algorithms that rarely do what their developers promise, all while accelerating climate change and using disproportionate amounts of electricity, draining our cities of water and power. If you want to promote humans, then promote humans, but giving in to the scam that is generative a.i. on a federal level is not the way to fo it. It's frankly embarrassing.
