General Comment

I would like a law that prevents AI companies from infringing on current copyright laws. There are people who are doing everything in their power to destroy these models and it will get worse the longer this goes unaddressed. Plus was there a NASA study that found that putting limits in place can actually spur creative solutions? If that's the case then regulating the AI space might focus it into something even more useful and productive than it already is. Considering how the Chinese AI companies managed to innovate under the restrictions placed on them by the US, it looks like regulation is the way to go.
