General Comment

While there is no doubt that AI would benefit us in a grand capacity. There are 2 issues that will constantly come up. Both problems lie on the inevitable overreliance of AI. The obvious being the needs for those that already work hard and do many jobs for us. In terms of things such as entertainment. AI could possibly fill the needs of an individual person. However at the end of the day. It would still leave that person wanting more. Like a drug addiction. The problem lies in what AI lacks which are things it can never achieve no matter how much one programs it. At the end of the day those that request AI for things such as art and entertainment will only get the bare minimum leaving the user desiring something to fill the void that AI just can't fill.

On a broader scale if left unchecked AI would lead us as people to make a sacrifice. What will we sacrifice for such a benefit. Our self-worth, peace or free will. With AI working unchecked, we as people will very likely no longer be worth of any value. AI would provide everything that a person needs even the point of as to how to live our lives. No choices would need to be made therefore removing the need of someone in charge. We could bring nothing new to the table as AI will have done that. We wouldn't need to rely on anyone, even ourselves which in turn our own self-respect would fall away too. Even our own identities as individuals would be rendered meaningless.

It would ultimately come down to which of the 3 (Self-worth, Freedom of choice, and Peace) should be sacrificed.
