General Comment

The lack of regard for protections of the common folk is laughable. No one wants generative AI to dictate life. It legitimately does not help ANYONE nor does it make anyone's quality of life better. There are so many comments about foreign spyware, however, domestic spyware and commercialization of sensitive, private information is allowed?

I find that difficult to believe. So many companies run their businesses off of software such as Google Docs /Sheets and Microsoft Word/Excel. Yet, they've been allowed to train their systems off of private information entered in these software. How is that not an infringement on our rights and how is that not cause for concern? People are entering their banking information, social security, and other forms of personal information into these documents for formal documentation yet somehow, it's been cleared for big tech such as Google, Microsoft, and Meta to train their AI for frankly, nefarious reasons?

There is absolutely NO reason why these companies should be allowed to use peoples' likeness for anything without their consent. There is absolutely NO reason as to why companies should be allowed to use intellectual properties that they do not own the rights to for absolutely anything. They already have billions of dollars in revenue. They can buy the rights if they want to use anyone's intellectual property.

If musicians and their companies can kick up a fuss over people using their music for trends or whatever it is they're mad over, big tech can afford to buy the rights to peoples' intellectual property. If it's art and photography? They have the means to afford them. There is NO VALID REASON for big tech such as Google, Meta, Apple, and Microsoft to scrape data that does not belong to them for "technology" that has no practical use and no actual purpose in existing.

People can't apply for jobs without getting their information such as phone numbers and email addresses leaked and spammed beyond reason.

Instead of trying to solve a problem that doesn't exist nor needs to exist, maybe you all should focus more on actual cyber/information security and not misguided, selfish, and poorly enacted bills/laws that do more harm than good.

Generative AI is a direct infringement on American rights and security. This is not technological progression, this is regression. There is no innovation involved with generative AI, only free farming of information to further capitalistic greed. There is nothing generative AI can provide that simple, human powered creation can't do and cover.

Instead of fostering a nation to be an even bigger laughing stock to other "developed" nations in the world, perhaps you all should be fostering more creative and technological programs that teach people critical thinking and innovative, non-harmful, ideas, products, and systems.

"If we don't invest in generative AI then we'll lose to China."

Maybe it's not generative AI. Maybe it's the severe lack of education and opportunities for innovators to gain recognition and funding to compete with other foreign powers. Any form of creative and technological freedom and advancement has been stunted because any new idea that gets introduced has been stifled and shut down before it gets off of the ground or loose notes stage.

We've long since lost to China. The US is classified as a first world country yet literacy rates are at an all time low and livable wage isn't

even guaranteed. Technology hasn't advanced since 2007.

Talent is ignored and thrown away in favor for the same big companies to regurgitate the same 4 ideas over and over again.

Again, generative AI will not save us. It is not the type of innovation that will enhance life as we know it. It will not allow for the country to prosper. It will further the rhetoric of the US being a laughing stock and joke of a nation.

Do better.
