General Comment

As a united states citizen I think generative AI has its place in the fields of research and science, I however believe that generative AI being to used to replace artists, writers, animators, actors, voice actors, programmers and other such creatives should not be the focus of AI advancement because it just leads to the degradation of all forms of art, including video games, movies, TV shows, cartoons and books. We have been seeing AI create pure slop while actual artists are struggling to get by.

In my personal opinion I believe that we should shift the main focus of Generative AI to aiding in research in the fields of medicine and science, and banning, or at least heavily restricting generative AI's involvement in the arts.

We should leave the joy of creation and creativity to actual humans or else all of our entertainment will become creepy uncanny slop.
