General Comment

Ai innovation can not come at the expense of copyright. This will make us no better than china in their intellectual property theft. This if anything will also hurt investors seeking production in the US due to there being no safeguarding properties. AI training will demolish any creative industry but also create a system of errors that can not be corrected once trained incorrectly. This will vastly harm the economy in ways that will be unknown until it happens. These laws are important. We can not disregard the law for the sake of one company. If this were to be ignored then there would be no protections for any creative work put to paper.
