General Comment

I am not against AI completely. But there's a problem when people use it to generate art of any kind, whether it's music or drawings or scripts or even programming code.

The overwhelming consensus among the art communities is that they do not consent for AI to be trained on their work. So that should be respected.

But what about when consent is given? Well, in fact, a lot of open source code that's super permissive, such as the MIT and BSD-2-clause licenses, still require attribution. AI does not give attribution; therefore, I would like to see the law reflect that even a permissive license like that can have teeth against generative AI. No attribution possible? Then you can't train your AI on it, because AI can and will spit out line-for-line copyrighted open-source code.
