General Comment

An industry propped up by massive amounts of copyright infringement and theft shouldn't have such a hold on our government in the first place, let alone as some kind of nebulously defined matter of national security or in the name of "global AI dominance." Get this crap under control first. If a system or tool has to rely on massive amounts of THEFT, such that they have to openly BREAK THE LAW to use it with any utility and the entire industry would be undone by the correct enforcement of copyright regulations in a court of law, then it's a useless system and I don't want it near any of the government's data. Or anyone's data. Stop endorsing the invention of nonsense that makes everything harder and worse. Generative AI isn't even appreciably different from what it was in the late 90s, you're just feeding it with things the owners didn't give you permission to use.
