General Comment

Hi, my name's Cassidy, and I work for a company that trains AI models including Grok, ChatGPT, and others. As someone that deals with AI and reviews them often, I can state with some familiarity that while AI is becoming more advanced over time, it isn't the 'artificial intelligence' we want it to be. It's a calculator trying to compute excessively complicated problems, and often times failing.

Bots often lose track of details within conversations within 10 turns, or 10 exchanges of that conversation, even this far into development. Trusting more power to AI is a bad idea, because it's just going to prove more inconsistent than human brainpower. Mankind is dependable, and hiring real people to do real tasks is how we create jobs. AI models are inconsistent when it comes to fine detail, and while some AI can do rather in-depth things, there's no ingenuity due to every solution coming from a thinking brain first.

A movement to enhance the power of AI is a movement against human ingenuity in America, a movement against the profit of the working man in America, and a movement against faith in mankind as a whole. Every dime spent pushing AI forward could be spent on the American people in a tangible way.
