## General Comment

Hello. I believe AI, while it can absolutely be beneficial, has intruded too far into lives of the average person. AI really, desperately needs to be regulated. I don't want to see people falling for scams generated by AI—photos and voice recordings and advertisements and dating profiles and phishing emails, these are way too easy for people to create. I don't want to see the time when AI becomes so painfully indistinguishable from reality that it ends up in a legal hearing (because eventually, that will happen). I don't want to see every beautiful man made thing in this world get replaced by sloppy generated amalgamations. And I seriously do not want to see the President of the United States venerating himself with AI generated nonsense. Generative AI shouldn't be remotely as accessible as it currently is. I don't think the average person should have it, I don't think politicians should have it, I don't think anyone should have it. What's the point of it all? You can create whatever your heart desires. Nifty. But what about the scammers? The new awakened world cybercrime? Technology is evolving significantly faster than we as human beings can adapt to it. Maybe I'm just a Luddite, but nothing about generative AI seems worth it.
