General Comment

Get bent on that AI executive order. If innovation requires breaching the law and treating creative work as mere grist for the mill, then the innovation is illegal and should not be pursued. It's no different than if a cure for cancer required feeding orphans through a bone grinding machine, or if furthering the car economy required badly-justified foreign wars for the sake of obtaining more oil. Anyone with half an ounce of respect for this country's laws and basic human decency would reject the proposition outright.
