General Comment

Letting AI companies scrape unowned data to train models will not improve national security nor the economy.

Hundreds of thousands of creatives would lose their jobs and livelihoods in an economy already suffering from unemployment and poor wages.

Allowing the scraping of copyrighted materials also sets a bad legal precedent to undermine copyright protection, threatening the stability of the entertainment and information sectors of the economy.

The data these companies are collecting for training is also at massive risk of being leaked to our foreign enemies through data breaches and reverse engineering.

Do not allow AI companies to train on copyrighted material or anything not (optionally) given to be used for training.
