

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-1b46-d6rt
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1762

Comment on FR Doc # 2025-02305

Submitter Information

Name: Linda Mäki-Sulkava

Address: Finland

Email: [REDACTED]

General Comment

"AI dominance" cannot be achieved by destroying the last bits of privacy if there ever was privacy on the internet to begin with. With unrestricted ai usage the society will come more lifeless, artificial. In the 'best' scenario the state is destroying people's living because of ai and corporate greed. What jobs will be left for humans if ai is going to be used for everything? It is already known ai usage will make people more stupid, is this what the companies want? So they are easier to control when they don't express critical thinking anymore? In an ai world, more and more people will stay poor and jobless in the long run because ai is not creating more jobs, it is destroying them. In China, the promised land of ai, modern ai is a tool from the heavens to control the citizens and give them points how good and loyal they are to the ruling party. How can it be ensured it won't go to the same way in the US in the future? Ai companies now are milking human made content for free, without consent or the ability to even say no (or get the illegal data out of the dataset) which should be illegal. Photos, videos, art, 3D models, books, social media posts, voices, sounds, everything, nothing is sacred for an ai company. Furthermore, ai has already become criminals' favorite tool to scam people to get their money or spread propaganda/false information. Which pretty much is what the companies do as well. Steal something from a human, use it to make something "new" and sell it back to the human telling it's something revolutionary you can't live without. There are things ai is useful for - science. Things like physics, chemistry, biology, medicine. In which ai probably have been used for years before these greedy companies and their applications. So yes, ai needs to be in tight control. The damage they cause is probably very hard or impossible to fix afterwards
