General Comment

The whole AI development and especially generative AI tools are out of hand at the moment. They do not disclose what materials they are training on, and from the result we can derive that they are indeed stealing many artists' intellectual properties without their consent. This is a serious violation of free will for every individual. Further more, they are creating a toxic environment for future generation, by not encouraging kids to focus on cultivating their brain and developing skills, making them into slave consumers in the the future. Not to mention, it is also affecting many industries and many individuals are out of work, and it is a terrible situation economically. Last but not least, the data centers are depriving planet resources leaving poorer humans from underprivileged areas to even more horrible living conditions, and they even have to fight for water. When there is no buyers, there is no harm. We must all be aware what's involved and take the right action before it's too late.
