General Comment

The proposal of OpenAI and Google on training generative AI must be rejected to protect the livelihood of the people and ensure a sustainable economic growth due to following reasons:

1. Letting the tech corps to train on data without copyright protection will accentuate the monopoly of these companies while putting independent creators out of work, thus wreaking the havoc over the whole economy because:

Generative AI is not fair use and it enables corporations to exploit or put independent creators out of work. Creators including illustrators, animators, writers and many other creatives use their intellectual labor as their main source of income to sustain their living and copyright law is to protect their livelihood from being exploited by these tech giants. Permission to train on copyrighted data without original creators' consent gives big corporation the entire control over creators' works and puts million creators at risk of losing jobs by enabling corporations unfairly compete with and generate income from the original works without having to pay original creators a fair amount of compensation.

Copyright sector will be devalued tremendously. The generative model is trained on works that require hours, months even years of human efforts to create millions of counterfeits in just seconds. Without protection on on copyright, the original works are prone to be devalued due to a mass production of low-quality counterfeits, which eventually hurts the economy as copyright sector suffers significantly. The damage that generative AI causes to the copyright sector is similar to how Chinese counterfeits take a severe toll on US economy.

2. Open AI and Google's freely rampaging on internet's data set will eliminate cyber security and cause social upheaval because:

The original creators are at risk of being cyber harassed and fabricated identity by these tech giants. Without copyright protection, creators' personal data such as face-revealing photos, videos, voice and internet profile are prone to be abused for dishonest, reality-distorting and fraudulent activities. There have been cases where deepfake videos use owners' data to create child sexual abuse material. (https://www.404media.co/laion-datasets-removed-stanford-csam-child-abuse/?fbclid=IwY2xjawJCSMdleHRuA2FlbQIxMAABHZsX96mfDpHwHv0CQ7dDDUVnY9NRPoWenDoYd0zs2jIQ_avSAIrnB-kWCw_aem_Rl6s9zOhH5WossWf2fxo6g)

3. Protecting independent creators by enforcing copyright law and strict regulations on generative AI are the only ways to ensure the well-being of the society and national security.

If the government enables these giant tech to freely train on copyrighted materials, people will greatly doubt whether the government works for the people or only for the benefit of a few richest. Think about how messy the government already became with the current president and the oligarchy. This will exacerbate the status quo even worse. Endorsing big corporations with permission to do whatever they want with people's intellectual properties means a government that serves only the billionaires' minority, thus create distrust and resentment from the people. Job loss coupled with lack of trust in the government quickly results in mass social upheaval the overall economy will be sent to its death bed shortly.
