General Comment

I believe that the public use of AI writing and images should be strictly limited. People are using their jobs because of Chat GPT and image generators, and things like Chat GPT and Google AI overview are spreading disinformation. People, especially children, are losing skills. How will we be able to compete with other countries if our children don't know how to write because they turn in AI-generated essays at school? AI also uses more energy which could better be used to power our country.

AI-generated media shouldn't be able to be copywrited or monetized to encourage people to continue to give jobs to writers and artists, who are valued members of society and contribute to the economy.

Scraping the internet for things to feed AI is theft of intellectual property, as the owners of that media did not consent to their work being used.

Now there's so much AI slop online that it's hard to find anything real. AI cannot make anything new or creative, and it's already starting to destroy itself on its own material.

I don't think generative AI will survive long if this keeps up. Search bars are being replaced with AI prompt bars which simply don't fulfill the same purpose. The people have stopped trusting anything they see, scanning it for signs of being AI-generated. People have started boycotting and lambasting companies that use AI images. I don't think the future is in this type of AI and I don't want anything to do with it.

Other types of AI can be useful, though! Having AI in a Roomba or a videogame or AI that helps you fill out forms is the way it's supposed to be. Robots are meant to do menial tasks so we have more time for leisure. Currently, AI is making art for us so we have more time to labor. This is as anti-human as you can get.
