General Comment

AI Action Plan

Philosophy:

The pinnacle of AI function should be, that it will enhance mankind's work, making our labor more effective not making it obsolete. This should be its overall goal.

And to give the average American the tools, power, and information enabling him to learn, build, or invent anything he can imagine, this will ignite a new renaissance where each individual has access to cutting edge info and instruments.

Ideas:

(Proposition 1) AI to function, has to make judgment and valuation calls based on what information it decides to trust, the internal valuation system should be easily seen, posted in a simple to read format. This information is significant to understand where the AI may be biased (e.g. Fakewebsite1.com receives valuation of "1" meaning it will not be trusted and another site Fakewebsite2.com could receive a valuation of "99" meaning it will be trusted)

(Proposition 2) To further human investigation, require AI to post its main sources of data for any given generated answer e.g. (This answer was found from Fakewebsite3.com & Fakewebsite4.com)

(Proposition 3) AI generated data should not be accepted, without consideration, as true. To this end an internal accuracy number shown as a percentage should be printed with any queried answer, based off trust of data source, and feedback from the users e.g. (This answer is estimated to be correct with a 59% accuracy).

(Proposition 4) Kill switches, require two distinct ways that an AI can be shut down, so that things won't spiral out of control e.g. (A proprietary shutdown code that can be update-pushed to all online devices, and the ability to shut down the main provider or server).

(Suggestion 1) Power demand for data centers should be filled by new hydroelectric dams and revivors this will help end brownouts and droughts. The profits could be used for upgrading/hardening the grid against EMP attacks, upkeep for the dams, and reduction of debt.

(Suggestion 2) Avoid AI that other countries would prize, (for control surveillance and propaganda). Aspire to an American AI that shares our values, and morals, "Life, liberty, property and privacy". Great literary works, and documents should be included with the AI's training, and set with a high valuation attached to each, enabling the AI to make the right calls for example, (The Constitution, The Bible, Shakespeare etc.)

(Suggestion 3) Only Proposition 4 would be required of all AI produced. However, any AI that is aided by the government through funding, grants, or contracts will be required to institute Proposition 1, 2, 3, and 4 If the Country and the taxpayer is aiding the company's AI production then the AI should reflect our standards.

(Suggestion 4) Avoid heavy regulation, so the average person has the ability to create and use their own AIs, this will help prevent monopolies.
