General Comment

I am strongly against the development of AI technologies that espouse, I quote, "unnecessarily burdensome requirements do not hamper private sector AI innovation". It is vital that any training or development of AI models continue to be developed ONLY with the values of being safe, secure, trustworthy, and in full respect of the rights of American individuals, such as intellectual property rights holders. Brazenly disregarding the legal rights of copyright holders, especially creative individuals, by using their works (be they visual, audio, written, or otherwise) to train AI models does nothing to further secure America's AI dominance, but in fact can stand only to harm Americans both in creative industries as well as on an individual level. Creative thinking and a strong support for creative individuals only advances us as a nation, as these individuals are innovators, bringing new solutions to every important aspect of life; from science, to invention; from creative national defense to incredible new healthcare discoveries. Not to speak of the soul enriching aspects of creativity, as well as our considerable love for entertainment as a nation. Please do not discard the rights of creators, be they the legal rights upheld in copyright law, nor the ethical and moral rights we have as humans to create without being stolen from. Respecting the rights of people who create texts, images, music, and more is not unnecessarily burdensome, it is VITAL, and it must not be considered. Thank you for your time.
