General Comment

I understand the need for AI development as an emerging technology that will alter the geo-political and economic landscapes going forward, but I also see how dangerous this technology is going to be if handled by reckless leadership. AI cannot be allowed to take over roles for Humans too quickly or too invasively, doing so, or even showing the possibility that that will happen, will only serve to further destabilize the American economy when tariffs are already making people cautious. The possibility of people losing their jobs because American leadership is so focused on efficiency that they don't give regard to the consequences of mass lay offs and the concerns of the people... it will simply cause more hesitation, more economic downturn before that reality even gets here. This is something that needs to be addressed with caution and tact, both qualities that are lacking in the current administration. So I feel compelled to give comment as well, please take steps to protect people's jobs, focus AI efforts on defense and security where it can be employed to protect the country.
