General Comment

Progress in Artificial Intelligence must not come at the expense of copyright law. Allowing AI to scrape any and all content will create a plagiarism machine, built on unpaid labor and unable to produce original work, regardless of the commands it is given. Major tech companies are already starting to step back from AI as the public realized it doesn't live up to the hype, frequently delivers low quality or outright wrong output, and wastes resources. Changing laws to allow a still unproven technology to grow is the wrong move.
