Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-88lw-z8o8
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1802

Comment on FR Doc # 2025-02305

Submitter Information

Name: Daniel Pool

Email: [REDACTED]

General Comment

What is being sold as "artificial intelligence" is nothing but a shell game. It's a prediction software solution looking for a problem retroactively. The way it has been used is to lie, cheat, steal, and manufacture garbage. The only way it can exist is by taking copy written material to train on. This means it's also a ethically terrible. Its output is illogical at best and dangerous at worst.

As a teacher, I see students trying to use it to cheat every day. Because of the technology's shortcomings, I usually catch them. However, the damage is done. The students stop thinking and let the machine think for them.

I've seen entirely invented journal articles that reference hallucinated concepts. Then I've seen researchers cite that entirely false information like it was real. This has the possibility to cripple our scientific community through the sheer volume of made up slop.

Lastly, beyond the social and ethical issues, our nation's power infrastructure can't handle the demand Silicon Valley is demanding. That infrastructure can't handle our nation's growing needs now from years of neglect as is.

For all these reasons, I believe the US should enforce copyright laws it has now. I think rules about AI should be created limiting its training data usage. Companies illegally training AI should be required to backpay the citizens they stole from.
