

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-8nap-gtku
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1810

Comment on FR Doc # 2025-02305

Submitter Information

Name: Saskia Kersten

Email: [REDACTED]

General Comment

I have seen many practices where AI can be used in a way that helps with tedious tasks. But none of these ever included training the AI with images uploaded by the public. Transcription tools can be trained by the handwritten documents within an institution or image recognition where the picture taken by an underwater camera of an ocean science institute to label sea life.

AI's that are being trained by public images have mostly been used to deceive or scam people. It is used to make AI content farms and low quality products that replace people, who would actually put effort into their work.

That's why I think image training should only be used with a specific goal and dataset. The users have to be able to choose if they want their images to be used to train AI, because many people post pictures of themselves, their children or living space and I think this critical personal information should not be used to recreate an similar image.
