General Comment

This is theft, pure and simple. For decades, over a century even, companies in the US have argued that we must pay for their movies, their books, and their software because they paid the collective people who created them and it was important to not only get back their money but make a profit. People have been fined and jailed for piracy.

This allowance of access to human labor for free to AI would completely upend the economy. It is anti-capitalist without creating a safety net for those creative people the companies are stealing from (so how are they going to afford to buy their products). It is anti-social in that it legalizes the theft of work of large masses of people without paying by massive corporations. And it is anti-American in that it signals the decline of the US strength as a leader in global culture, when our government would give it away for nothing to a collection of computers at the expense of its own people.
