Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1814

Comment on FR Doc # 2025-02305

Submitter Information

Name: Ryan Malin

General Comment

AI dominance isn't as important as protecting the creative work of every individual. The ouroboros this would create, AI looping in on itself, would even lead to Google and other tech companies' software and content becoming free under such a law. They'd destroy themselves just because they realize there's no other way to get what they want from the investments they put in that are failing.

I've been writing online for my own genre fan site for over a decade, while creating original works I hope to one day see published, but if a machine from a company that only wants to make money will be allowed to take it and make it its own... what's the point? What's the point of creating anything new if they can snatch it from me and profit from it, leaving me without anything for it? Who will want to create in an environment like that? No one. America will be a laughing stock compared to the rest of the world. And for what? Some tech company's money? I think the answer is clear: this should never become a law or else this dominance they claim to seek... it'll undo everything and we'll all end up with nothing, even the tech companies.
