General Comment

It is not a good idea to let AI databases scrape copyrighted material, because it doesn't fall under fair use.

It is not transformative in the slightest, because of the fact that AI would take in non-transformative material as the input.

Not only that, but it is unethical towards creatives who make art. Allowing copyrighted material into the database could allow companies to steal someone's art, train their database on that art, and the like without even paying said artist their rightful royalties
