General Comment

Copyright law aside, the Fifth Amendment ends with "nor shall private property be taken for public use, without just compensation." Allowing any company, Big Tech or otherwise, to be given access to loopholes to steal material in order to train their AI goes against the foundations of our government. Additionally, allowing companies to essentially destroy copyright protections opens them up to other countries, companies, and people stealing said companies' content under the guise of training their own AI programs.

While I am not against AI, I am against training it without permission and compensation to the original content owners. Nothing in this plan/EO as currently presented suggests that these will be required or enforced. This plan should be tabled until these two items have been addressed and suggestions have been taken from people who work in copyright law, tech, and security, and who are not company CEOs looking to make money off of property theft.
