Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1835

Comment on FR Doc # 2025-02305

Submitter Information

Name: KM S

General Comment

Generative AI as it stands now is an unethical job stealing, energy inefficient money suck. It steals jobs from creative humans and lowers the quality of entertainment. Generative AI has no soul and steals the human element from creation which leaves us all poorer.

If the government must put more effort into this loser creation you must also protect the copyright of human creators first. You must allow human artists, musicians and creatives to protect their livelihood from those who wish to digitally steal from and profit from their hard work and innovation.

You must solve the energy consumption problem. AI takes more energy than some countries and that is absurd and not sustainable long term.

There are better things to focus on that a solution to a problem that doesn't exist. Humans are already VERY good at making artwork and music and movies and games. We don't need a computer to generate it for us, unless your goal is just to disallow people from making a living in the creative field.
