## General Comment

We do not need this measure. It is a drastic overreach that puts the rights of corporations above the rights of people. If it were put into the law the only result would be more money in the pockets of CEOs and an even harder working environment for average people. I saw many people lose previously stable jobs when AI gave their bosses an excuse to fire people are use inaccurate, poor-quality tools instead and produces worse products and depended on the theft of copyrighted material in order to produce those worse products. The copyrighted material that AI steals has to be better protected to save American jobs and if we all want services and products that work well and last a long time we cannot permit AI to make them, because it does not do that. AI only guesses what the correct answer is and has been shown over and over to lie, misrepresent the facts, and lead human users astray. More AI stealing from more areas is a recipe for a worse society with worse products and ideas.

We do not need 'dominance'. We never needed dominance. We would have a stronger society if we focused on ensuring quality instead of being first every time. Making the best of anything takes time, and we would actually be the best if we slowed down and focused on making this tool right (without theft of IP and without stealing jobs) instead of stealing harder and hoping it works eventually.
