General Comment

Hello,

I am an artist. The unchecked growth of “AI” in recent years has being incredibly detrimental to the artistic community, especially in online spaces. The generative “AI” models need to be regulated to align properly with existing copyright law. If complying with the law makes these models non-functional, then they shouldn’t exist in the first place. Much less be given subsidies from the federal government.

I ask, what is the main export of the The United States? Other than pollution and the military industrial complex, I’d argue that it is our art and culture. When the art we create isn’t even made by actual creatives anymore, which is where I see artistic field are heading if generative “AI” if allowed into artistic fielded unfettered and unregulated. Our art will suffer, our creativity will die, our culture stagnates. The soul of America are will be compromised by selfish capitalists, who would rather buy a machine to make a movie, that pay living artists a livable wage to make a movie. We artist are already losing jobs and opportunities. The studios that fund our art and entertainment have made billions of dollars on the hard work of artists. And now these studios are eager to replace artists with computers that have been trained on stolen works.

Artist have been sounding the alarms about chatGPT, OpenAI, and other generative models. These are not tools to help artists(as we have been told), they are tools meant to replace us. We have been asking for regulation, but her have been met with apathy. It was never about making creativity accessible, but rather taking opportunities away from the ones who actually dedicate there lives to creativity.

I am not a Luddite, I do not want to destroy computers and I understand that there are beneficially and practical uses for “AI” tools. But when artists are excluded from conversations about how these tools are implemented into artistic fields, we understands that it’s not about empowering artist with these tools, but replacing them. And doubly, when these tools are trained on massive amounts of stole artwork it becomes crystal clear that we are not being respected.

As an artist I stand with my fellow creatives when I say copyright law should be respected. Regulate “AI” and protect artistic fields from technology capitalists who seek to steal from us and replace us in our own field.

Thank you.
