Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1856
Comment on FR Doc # 2025-02305

Submitter Information

Name: Kate Balfé

[REDACTED]

General Comment

American ingenuity is absolutely founded on the idea that individuals own and have rights over their intellectual property. It is the entire foundation of why we were able to reach prominence over the global economy so quickly. It is what influences people to try, and arguably, gives creatively driven people (a massive, massive portion of all people) the will to live. These laws can not be dismantled, the country will NOT recover.

I personally am 46 years old, and I have only ever been a concept artist. I am very good at it and have spent my life honing my skills. There is room for AI in all industries but using it to steal the livelihoods of millions of people (by this I mean, say, a corporation being allowed to steal my style without any payment to me) is just bad for everyone. Google and open AI do not need more power. This not something I would ever recover from financially. My children, my community, all of us will suffer. Conversely, I suppose I could train an ai model to use any style I wanted, including Pokémon or Disney, without any legal repercussions.
