General Comment

I am a comic book author and illustrator, making art is my livelihood. I am staunchly against generative AI and the illegal way they take everyone's content and use it to train their models without compensating artists for the work it's taken them years to perfect. This attack on everyone's copyright to allow the continuing training of AI is both immoral and detrimental for the economy, as it will kill millions of jobs in illustration and art. Not only that, but it would affect every level of the entertainment sector, including music companies like Universal Music, movies, and even programs. GenAI needs to be limited, required to contact every author whose work they're trying to train their models on, offer both compensation AND royalties every time their work is used as a base for something, and forced to respect the author's decision if they decline their request.
