General Comment

As a creator who has had great issue with copyright violation of my material, I am concerned that tech companies are using the work of others to train their programs to make similar content.

AI models are machines being trained on copyrighted material without permission. This practice undermines the rights of creators and gives these tech companies a right to profit off off the work of hard work of others.

AI companies should seek licenses to use copyrighted material for training purposes.

AI companies should disclose the sources of their training data and how they ensure copyright compliance.

Copyright holders should have the right to sue AI companies for infringement.

AI developers should prioritize ethical considerations and respect copyright laws.

Human thought, voice, and creative output is the basis of our entire civilization. Allowing a handful of tech companies to take every aspect of an individual's creative work and remix it for their own profit is a terrifying prospect.
