

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-brdw-wlb9
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-1864

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kate Probeck

Email: [REDACTED]

General Comment

AI is built on scraping and stealing others work. Whether it be artistically or otherwise, it is a cheap way to produce work without people in mind. How can there be innovation if AI is scraping what exists and never considering future changes? How will our economy flourish if creatives are out of jobs, similar to the growing amount of unemployed people in the US due to "efficiency cuts". Who isn't immune to being cut when AI is used widely and without caution?

Additionally AI has been used for deep fakes to hurt people and forever change their lives, as images can sometimes look too real and put people in comprising situations that actually never happened.

The energy AI uses will also and has also put us on the fast track to destroy the beauty of this planet. Where will we live if Earth is gone? Musk dreams of mars but rationally, we might destroy our home before finding another one to then destroy, too.

We need to take the funding for this and put it towards something useful that has been taken away, like protecting our national forests or hiring back federal workers who help move processes in the government.
