General Comment

As an artist within the United States, I find any proposal to allow Generative AI training to use copyrighted data without permission appalling. Companies behind these programs cannot be allowed to freely train on the data of those they have marketed themselves as a replacement for, under any circumstances.

Copyright is enshrined within our constitution, and is vital to protecting the individuals who create said copyrighted works, allowing them to guard their identity and to seek a profit from their own labor.

To allow companies training generative AI programs to disregard this, especially in light that said companies have repeatedly stated their intent to market their programs as a replacement for human creativity and ingenuity, is nothing more than pandering to greed, and a tacit endorsement of profits over people. OpenAI, Google, and other companies championing the unregulated development of Generative AI claim they cannot train their data sets without free access to thousands of years of creative works, and yet say that human input is no longer important to producing art, music, and literature. The United States must respect the rights of its citizens and regulate the Generative AI industry accordingly.
