## General Comment

If America decides to prioritize the use of unlicensed work as training data for these big AI tech firms it risks losing the very thing that makes it unique and profitable... If working artists are unable to contribute meaningfully and make a living there will no longer be incentive for one of our biggest exports (entertainment in all forms music, movies, games...books... ect). Generative AI is largely proving to be unprofitable and far too expensive to maintain at the rate that these companies wish to maintain. In the end everyone loses out if they are able to skirt that law and destroy other industry and livelihoods in the process. These big business are racing to the bottom for a technology that is largely useless to most people, they put on flashy displays but in the last three years generative ai hasn't really revolutionized any business if anything it has muddied things up for many people often making things more complicated than it needs to be by adding an automated element that doesn't work well and frustrates more than helps.

If America wants to keep its competitive edge it needs to uphold copyright so that working people can maintain their livelihoods and continue to contribute to society. Don't allow these companies to pull a fast one while they line their pockets and promise impossibilities.
