General Comment

I do not think it's a good idea to allow the further development of generative AI, or to allow it to eat up jobs that are better done by humans and do not need to be done by a very new and uncertain technology. AI technology is also a heavy environmental burden, using up water that the American people need. The spread of AI "photos" that appear real is already creating widespread misinformation and causing people to have a distorted view of reality, and generative AI is being used to create realistic pornographic images of non-consenting individuals, including children. And, as an artist, I am staunchly against AI generated images and writing of any kind, which can only be created by stealing work from 10s of 1000s of artists and writers. Generative AI is not particularly useful or necessary, especially when the things it does are things that people enjoy doing and do much better than AI could ever do, and it hurts every person who is not a billionaire by subsuming jobs that should be held by humans.
