General Comment

AI is nothing more than a plagiarism machine that can only "create" by stealing other people's intellectual property. It's inaccurate, unreliable and cannot produce consistent answers or results. It makes things up wholecloth and does so indiscriminately. It's not some magical entity with a consciousness pulling creativity from the ether, it's a mulcher gobbling up information it is fed and spitting out an amalgamation of what it ate.

It's not a good investment, as inevitably it will be stealing massive company's intellectual property, creating not only a liability but a waste of energy. There are no original ideas from AI and this is proven by how badly Sam Altman et al insist that they be able to train their programs on existing art and writing. It would be nothing without what is shoveled into it. It cannot make anything on its own.

AI is no more than someone eating a bar of chocolate and then presenting you with their fecal waste afterwards going "well it is brown, and I made it FROM chocolate, so this is chocolate". I'm not eating that.
