General Comment

Absolutely against and appalled at the prospect of allowing tech corporations to steal copyrighted material to train their faulty generative AI that ONLY works if it's utilizing things already made. If you can't train an ai on your own knowledge and what you have created it is theft. Copyrighted material is meant to be safe from this sort of anti-intellectual property theft. Allowing a company to steal someone's work to make money off of it is all that generative AI does and is a danger to those in the creative arts - a population that already struggles to have their monetary needs met despite the important impact art has on the world. If a human couldn't be bothered to make it, it isn't worth seeing and having to steal other's work to make something not worth seeing is harmful and insulting.
