General Comment

Hi, local independent creative speaking. Not only does even considering this make little to no sense, but letting this go through will literally benefit NOBODY in the long run. The creative industry as you and I know it WILL crash and burn, leaving both the workers and business owners in the dirt and, inevitably, penniless. In terms of processing power for these generative AI models, they will cost the public and the tech companies replacing humans with them more to operate than if they would've just, ooh, I don't know... paid their real, human workers fairly? By putting this through, you will be damning the economy and the environment just to save a few bucks in the short term.

In terms of basic common sense, the "unnecessarily burdensome requirements" mentioned in the summary that are hampering "private sector AI innovation" are called people. Those people — who are asking for theft protection and insurance for their work and output in ANY industry, be it creative, educational, technical, clerical — have just been watered down to "unnecessarily burdensome requirements". I need whoever is reading this, whoever is considering this to be even a mildly good idea, that utilizing generative AI in any capacity that would replace human work WILL NOT WORK. That's the long and short of it. It won't work. This technology is still very much in its infancy and utilizing it to such a level WILL NOT WORK. By putting this through, you will damn yourselves as businessmen/women, you will damn every corner of the economy where real people with real experience will be laid off and replaced, you will damn your children in schools where teachers will no longer be teaching them what's real and what's fake, and there will be no way to avoid its downfall. This proposed use of Generative AI will crash and burn and will take this entire country down with it.

You will be putting the fate of this country's economy, workforce, and reputation in the hands of something fake. That is what "artificial" means, right? Pretty sure we all went to school at once point and learned what synonyms are. It's fake intelligence. You want us to be dominant with "fake intelligence". If you cannot hear how absolutely backwards that sounds, you shouldn't be putting this through because, clearly, you don't have enough knowledge on this technology to make this drastic of a change.
