General Comment

AI as it exists now is built upon the theft of copyrighted material and powered by massively inefficient computer networks that leech energy from the grid and require inordinate amounts of water to cool. In its current state it is already being used to justify mass layoffs, and is a huge waste of resources during a time when resources are already scarce. It is also extremely flawed, often providing dangerously incorrect and/or biased information when prompted.

I do not support the expansion of American AI technology not just because it is wasteful, but because it is dangerous to American national security. The accumulation of data, already taken without consent, can be easily compromised by bad actors. A product whose success is based upon continued theft is a product that deserves to fail.

President Trump's investments in AI are not born out of a desire for "a brighter future for all Americans"; like all his policies they are born from a desire to strip America for parts and profit off of the aftermath. There is no care or consideration being given to the danger inherent in relying upon AI. The danger is, to his administration, part of the benefit. Keeping the American people reliant upon faulty and biased AI discourages the citizenry away from educating themselves and thinking critically about the information they receive, which benefits the Trump administration as it engages in malicious and illegal activities such as the seizing of protected social security information by Elon Musk, a unelected private citizen. Trump does not desire to improve the lives of the American people but to control yet another important stream of information so that he can control what Americans see, hear, and believe. It is deeply disturbing, and it is our duty as citizens to not comply with this throttling of information in advance.
