General Comment

AI technology has proven to be an invaluable resource that has the potential to benefit people everywhere. However as this new technology develops, it is imperative that measures be put in place to ensure its ethical use.

Already several concerns have been brought up within various industries. One concern is the usage of AI by employers to screen resumes. This is a brilliant use of AI technology, particularly for companies that receive hundreds of resumes to sift through. However it has caused many qualified people to lose employment opportunities, simply because they did not have certain buzzwords in their resume for the AI to pick up. This technology needs to be further developed so that these potential candidates are not accidentally weeded out due to machine oversight.

Another major concern is in how generative AI technologies are trained. It is widely known by now that this process is largely performed by searching the internet for various images, with no regard or respect for intellectual property rights. Laws MUST be put into place that clearly state how generative AI is allowed to be trained, and used. The American people have a right to own the things they create, and it is being stolen by these companies to train their AI. This should not be an opt-out service, it should be VOLUNTARY to allow your work to be used to train AI, whether it be images, audio, video, or writing.
