General Comment

When defining "the priority policy actions needed to sustain and enhance America's AI dominance, and [ensuring] that unnecessarily burdensome requirements do not hamper private sector AI innovation," keep in mind that private sector AI "innovation," unless carefully regulated, will include gallons of AI snake oil produced by greedy businesses eager to fleece the public, while gobbling up and abusing intellectual property of millions of Americans skimmed from the internet. This is akin to criminals who might fraudulently steal \$1.00 from hundreds of thousands of bank accounts without notice.

Real benefits from machine learning, such as in medical diagnosis, are not based on data gathered indiscriminately.

Data worth using for creating an AI model worth creating and valuable enough to make money for the business is worth paying for, and it's the only way to prevent abuses by such companies.
